;Heyy dear user

Thanks for trusting us to use this program; Due to the day-by-day expansion of cyber operations in virtual space; and users' privacy not being safe; The Black Source cyber security research and development team, by making this software available to users, in search of building faith in cyber space for all its users; has done something Therefore, on this basis, it is necessary to tell the conditions for improving service delivery and quality in responding to your service. Note, if you do not read these rules and use the desired software. Receiving your services is illegal and the software development team has the option of not providing you services and also suing you.

:The first chapter (explanation of keywords)

User: a natural or legal person or persons who are of legal age in their respective countries and who use the software with their own will and authority.

Admin: programmers and software developers, who have produced the work in real or virtual form and also legally have software privileges; It should be noted that only these eyes are allowed to access or change software resources and codes.

Software: The current electronic program, known as FSCP.exe, is available for users on the Windows operating system.

The effect of the right: permission to access and change the main or secondary resources of the software. Permission to publish or download resources from the software. permission to publish software, permission to change the access level of users, etc. (mentioned items, according to the rules of the Black Source team, currently only admins authenticated by the Black Source team and no other person is allowed to access the items does not have the above legally!)
:The second chapter (how the software works)

The famous software with the brand name FSCP.exe is prepared and produced for the security of cyber security! In this way, if you use this program, you will be able to check your security files before or after downloading to make sure that there is no malicious file in the original file and that the file sources are not fake! Therefore, from running the program and entering the management panel, you will have access to two options.

If you select the "check files" option, you can select the desired file from the main or external memory of the device, and expose the selected file to the software to check and scan it to ensure that the file is from the correct sources and that the file is not fake. . , make sure, also if the desired file has a problem. You can completely delete all resources and files related to the malicious file from your system through this software.

If you select the "check links" option, it is possible for you to identify malicious anonymous links from other links! For this, it is necessary to give the address of the desired link to the software so that after checking, it will inform you of the result.

Note, if the site is fake in terms of phishing and banking, it is not possible to check the items with the current software, and you need to contact us to check and receive the software through the software support! The current software is only able to identify links that, when accessed, download files or files through the system or execute files. You can also download files through this option, so that they can be checked quickly and automatically.

To get more information about how the software works or to get guidance on its implementation, read the software's comprehensive guide file.

:The third chapter (required access to the software)

According to the way the software works, this software needs some accesses from your operating system to provide services in full, which we will discuss below, it is necessary to mention the above software. In order to get access other than the mentioned accesses, while blocking the software from the received accesses, the cases that happened with the support of the software in the flow to prevent possible injuries for you and other users.

Access requirements of the software:

– Ability to connect to the Internet

– Ability to check system information

– Ability to change system information

The fourth chapter (how to access the software):

This software and the desired software along with the latest news of the Black Source research and development team; You can download from our official site at www.blacksource_tm.com or choose your credit and subscription.

Be sure that all the news and resources will come to your attention only through this portal, and all other sources that have unofficial and illegal activities under our trade name and we completely reject their authority.

Also, if you need to change the type of communication; Cases will be notified through this site.

The fifth chapter (rules of using the software):

All the rules include the ones stated in the right of the work (Chapter 1) and other things such as not vandalizing resources, codes, files, etc. software; Non-abuse of software such as shopping; Sales, undefined uses, etc. and the privacy and information law, based on international laws and country laws, are subject to compliance by users in the field of cyber security laws and e-commerce laws, and in case of violation of any of them; In addition to the possibility of not providing services to the offending person and blocking his access (termination of the contract), the Black Source team has the possibility of pursuing cases according to the laws of the country of software developers and international laws.

Dear users; We hope to work together to improve the security of the cyber space for ourselves and our loved ones by observing the above-mentioned laws and also observing the moral values.
